One of the remarkable traits of cuckoos is their reproductive strategy. Unlike other birds that build nests and raise their own young, cuckoos are notorious for laying eggs in the nests of other bird species. The foster parents raise the cuckoo chicks, often at the expense of their own offspring. This behavior is known as brood parasitism and has fascinated scientists for years.

The Helm Identification Guides

When it comes to identifying cuckoos, the Helm Identification Guides stand out as the ultimate resource. Published by Helm, a renowned publisher specializing in ornithology, these guides provide birders, naturalists, and researchers with a comprehensive and reliable source of information.
