

The Race To Protect Our Most Important Natural Resource

Our planet Earth is a treasure trove of natural resources that sustain life as we know it. From freshwater to forests, these resources play a crucial role in maintaining the delicate balance of our ecosystems. However, in recent times, one resource has emerged as perhaps the most important of all - water.

The Significance of Water

Water, without a doubt, is the essence of life. It is an invaluable resource that is essential for the survival and well-being of all living organisms. From drinking and cooking to agriculture and industry, every aspect of our lives relies heavily on water.

However, the availability of clean and safe water is increasingly becoming a scarce commodity. Rapid population growth, urbanization, industrialization, and climate change are all putting enormous pressure on our water resources.

The Threats to Our Water Resources

One of the greatest challenges we face in protecting our water resources is pollution. Industrial waste, agricultural runoff, and improper disposal of chemicals are among the factors contributing to the contamination of our water bodies. The lack of proper sanitation systems in many parts of the world also poses a significant health risk.

Another threat comes from over-extraction of groundwater. With the increasing demand for water, particularly in arid regions, underground aquifers are being depleted faster than they can replenish. This not only affects the availability of drinking water but also leads to land subsidence and the intrusion of saltwater into freshwater sources.

The Race to Protect Our Most Important Natural Resource

Recognizing the urgency and severity of the situation, governments, organizations, and individuals worldwide are now engaged in a race to protect and conserve our most important natural resource - water.

Efforts are being made to raise awareness about the importance of water conservation and responsible usage. Education campaigns are being conducted, highlighting the impact of our actions on water quality and availability.

Investments are also being made in developing innovative technologies to treat and reuse wastewater. From decentralized treatment plants to water desalination techniques, scientists, engineers, and entrepreneurs are working tirelessly to find sustainable solutions to our water scarcity challenges.

Furthermore, there is a growing emphasis on implementing stricter regulations and policies to prevent water pollution. Governments are imposing fines and penalties on industries that fail to comply with environmental standards, pushing them to adopt cleaner and greener practices.

The Role of International Cooperation

The race to protect our most important natural resource cannot be won without global cooperation. Water knows no boundaries, and the challenges we face are interconnected. Issues such as transboundary water management, equitable distribution, and the impacts of climate change require collaborative efforts between nations.

International agreements and frameworks, such as the United Nations Sustainable Development Goals and the Paris Agreement, aim to address water-related issues on a global scale. These platforms provide a forum for countries to share knowledge, exchange best practices, and work together towards a more sustainable future.

Water, our most important natural resource, is under threat. However, the race to protect it is gaining momentum. Through collective action and collaboration, we can overcome the challenges we face and ensure a future where clean and safe water is available to all.

As individuals, we can contribute by making conscious choices in our daily lives. Conserving water, reducing pollution, and supporting organizations dedicated to water conservation are just a few ways we can make a difference.

It is time to recognize the value of water and take action. Together, we can secure the future of our most vital natural resource.

“The Race to Protect Our Most Important Natural Resource: Water,” is an investigative view into the most pressing threats against modern society’s most precious natural resource; water; and how to mitigate them.

This book is NOT about taking shorter showers, and it is NOT about selling you on water filters... It is about knowing the current score related to the very essence of life, and helping you become more aware how you can make a positive impact.

“The Race to Protect Our Most Important Natural Resource: Water,” examines the current geo-political public policies which were designed to help conserve and protect our very limited clean drinking water sources, and what government, community activists, and advocates are doing about the problem of dwindling clean fresh water supplies which humans rely on to sustain life.

This book reviews historic series of events, that act as lessons learned by former civilizations and communities, as examples of what can occur when we do not approach the subject of protecting and preserving clean drinking water for generations ahead.

“The Race to Protect Our Most Important Natural Resource: Water,” provides perspectives from a number of data and reports on what is happening to our clean drinking water supplies, and why it is absolutely critical that we take action now, before time and water runs out.

This books shares detailed accounts of economic disasters, and the fall of most recent communities and trade as a result of mismanages and misused clean drinking water supplies; as these reports serve as a warning sign of things to come in the not so distant future.

Francis Okelo, Former Ambassador and United Nations Special Envoy, shares his thoughts about “The Race to Protect Our Most Important Natural Resource: Water,”

“Samuel K. Burlum makes a passionate call to our American Society and to the world at large not to take clean and fresh drinking water for granted, because soon there will not be enough...He offers practical recommendations and suggestions for action our leaders, policy makers, and ordinary citizens will find

most helpful in addressing this global challenge. The time for action is now, and this is a race we must win.”

Forward is by Dr. Carley Corrado, PhD, Renewable Energy and Soil Scientist, who also has a moment to review the written works by author Samuel K. Burlum.

“The Race to Protect Our Most Important Natural Resource: Water, Samuel K. Burlum provides an excellent brief and well-rounded look at the issues surrounding water today. While the current challenges in the way of having enough clean water are vast and intimidating, those issues are broken down into concise explanations with tangible instructions as to how to navigate through the mucky waters. This is a great place to start in becoming informed.”

The Author, Samuel K. Burlum, is a career entrepreneur, author and investigative reporter, who’s career dates back to 1992 when he founded his first business. Burlum’s area of expertise has been within the green industry, including green technology, green related consumer products, and public policy relating to environmental concerns. Mr. Burlum holds an Associate’s Degree in Applied Sciences, having majored in Business Management while attending Berkeley College, Woodland Park, New Jersey. Currently Mr. Burlum is the CEO and President of Extreme Energy Solutions, Inc., a green tech company which brings to the market green, eco-friendly consumer products and emissions reduction technology for the automotive and transportation industry.
