I started this short eBook because I believed that if corporations took a slightly different / hybrid approach to managing major technology transformation programs, that they might be more successful in getting these programs done on time, on budget, and meeting the goals of the programs. I have combined approaches from the Enterprise Architecture and Program Management fields to

come up with a simple to follow matrix and step by step working points for corporations to follow.

“According to Gartner's annual Predicts research on industry trends

"Transformation remains a critically important phenomenon across all industries.

Many industries will face intense challenges in 2014 and beyond, and will have

no choice but to radically change their established business models. Last year

saw many industry decision-makers focusing on adopting new technologies to

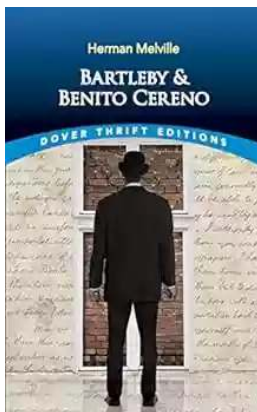

improve business operations by addressing developments such as the Nexus of

Forces, the convergence of social, mobile, cloud and information. Today, by

contrast, leaders are significantly shifting their business models and processes."

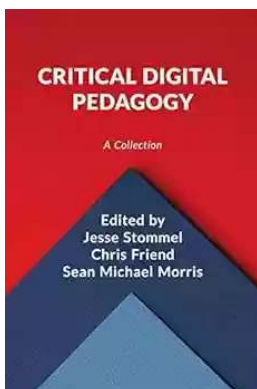

I hope this eBook helps every Business, IT, Program or Product leader to create a

successful technology transformation program for their company.
